

Environmental Policy - Sunshine Cycles

Sun powered fun

Sunshine Cycles purpose is to enable adventures that are environmentally friendly and innovative. We plan to grow our business rapidly and be a leader in the micro mobility space.

Our Sunpods are built with the pillars of the Sustainable Development Goals to enable our users, partners and investors the confidence that with the implementation of Sunpods and our proprietary technology will elevate all those who get to use them, without harming the local or global environment.

Our Ecologically Sustainable Development (ESD) requires the effective integration of economic, environmental, social and equity considerations in decision-making processes. We aim to provide for the needs of present generations without compromising the ability of future generations to meet their own needs.

- **Precautionary Principle:** If there is a threat to the living environment of people or the planet, or we are unsure if there will be, we will work to reduce the chance of serious implications through investigation and consultation with the appropriate and respective parties.
- **Intergenerational equity:** Sunshine Cycles works to always ensure that the health, diversity and productivity in our present Sunpod generation does no harm to future generations and in fact benefits and serves future generations.
- **Conservation of biological diversity and ecological integrity:** Sunshine Cycles is invested in the redesign of the harmful effects of climate change and pollution. Through our Sunpods, technology and e-bikes, we offer alternatives for the movement of humans on the planet, through sustainable, ethical and environmentally focused transport.
- **Improved valuation and pricing of resources:** Assess and value all our acquisitions and infrastructure costs concerning the environmental costs and benefits. Utilise this

information whenever we make decisions within our business or assist those we do business with.

Through the implementation of this Environmental Policy Sunshine Cycles is committed to always ensure that our materials, communications and conduct is as sustainable and in tune with human movement as possible. We understand that individually we are a part of nature and that our own personal health effects the health of the planet and vica-versa, therefore we will always:

- Be up to date on green fiscal policies to benefit our practice.
- Minimise our carbon footprint.
- Work tirelessly to eliminate toxic materials in our supply chain, and look at sustainable options and substitutions.
- Invest in local and global communities to implement our transport solutions.
- Promote the reuse of materials in our existing supply chains.
- Recycle and refurbish our Sunpods, and bikes to ensure that they are continuously used to their true end of life.

In all of Sunshine Cycles operations we are committed to fulfilling our environmental and corporate responsibility charters. Our objective is to create a fully sustainable business that is good for us but also good for the planet and future generations. These objectives and commitments are backed internally by audits and performance indicators that are consistently addressed and improved by our management and suppliers.
